***Allowable Subject Matter***

1. Claims 1-5, 7-11, 14-15 and 17 are allowed.

Art Unit: 2434

2. Independent claim 1 is the inclusion of the following limitations that are not found in the prior art and they are uniquely distinct features. The closest prior arts Iguchi et al., Pub. No.: US 2002/0169960 A1 and De Roose, Pub. No. US 2002/0049746 A1.

Iguchi discloses a storage device includes a tamper-resistant module and a flash memory. In correspondence with a command, a CPU inside the tamper-resistant module judges the security of data received from the outside, then recording the data as follows: High-security and small-capacity data is recorded into a memory inside the tamper-resistant module. High-security and large-capacity data is encrypted, then being recorded into the flash memory. Low-security data is recorded as it is into the flash memory. This recording method permits large-capacity data to be stored while ensuring a security (i.e., a security level) corresponding thereto.

And De Roose discloses transmission of real-time data from a network element to an application server, wherein, for real-time data generated in a network element, which are to be transmitted over a transmission link, the data transmission is disabled and the buffers are being filled to a flushing threshold, the data present in the buffers are flushed to a permanent storage medium as backup data. When data transmission over the link is enabled, backup data are read out into the buffers when the amount of filled buffers is smaller than a first threshold value and as long as the amount of filled buffers lies below a second threshold value.

Art Unit: 2434

However, these arts alone or in combination, fail to anticipate or render the following limitations: “A memory device comprising:

a first tamper resistant memory which cannot be accessed directly by an external electronic device;

a second non-tamper resistant memory which cannot be directly accessed by the external electronic device;

a data processing section that moves data in the first tamper resistant memory or the second non-tamper resistant memory; and

a managing table in which managing information for the data stored in the first memory is described, the managing information including information indicating whether or not the data can be moved to the second memory,

wherein when requested via the data processing section by the external electronic device to download or install first data in the first memory and if there is no space area for downloading or installing the first data in the first memory, said data processing section moves to the second memory second data which is accumulated in the first memory in order to create space area in the first memory sufficient to perform the downloading or installing the first data upon reception of an instruction from the electronic device, and when there is space area available in the first memory, said processing section restores the moved second data in the second memory into the first memory, wherein the second data to be moved is determined on the basis of an instruction from the electronic device and on the basis of the information indicating the second data can be moved to the second memory described in the managing table” as claimed.

Art Unit: 2434

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
